

Make cleaner air decisions

Try to avoid non-essential deliveries

Diesel vans are one of the largest sources of pollution on our local streets. How we get our online shopping delivered to us can be a big influence on how many polluting delivery vehicles drive down our roads each day.

Delivery Options

Green delivery slots

If you are booking a supermarket delivery, they will often indicate when they are already going to be in your area. Choosing one of these delivery slots means that the vans have to do fewer trips, reducing the amount of pollution they create.

Consolidate shopping

Try to order all the products you need from a shop in one go. Some shops may offer the option to group your items into as few deliveries as possible, selecting this option will help to reduce the number of delivery trips to your house.

Click and collect

Walk or cycle to pick up your delivery from your local delivery hub. Some online stores will give you a click and collect option, where they deliver to a local hub near you, such as nearby shop or locker. As well as avoiding the dreaded red card of a missed delivery, by choosing this option you again reduce the amount of mileage carried out by delivery vehicles.
